

## INSTRUCTIONS AND TIPS FOR USING THE RETRASTRAP

**DETERMINE THE FRONT AND REAR OF THE RETRASTRAP:** The correct position is to have the metal D-Ring in the shoulder pad pointing upward and the buckle pointing downward when worn on your torso.

**ATTACH THE RETRASTRAP TO THE LUGGAGE HANDLE** Insert the Velcro inside the slot and loop around the bag handle. Make sure the attachment is tight and doesn't move along the handle.

The attachment on the Luggage handle should be on the closest point to you. For example if you pull the luggage with your right hand, attach the RetraStrap on the far left corner of the handle.

**ADJUST THE LENGTH OF THE RETRASTRAP TO MATCH YOUR HEIGHT AND THE BAG HEIGHT.** Open the shoulder pad Velcro sleeve, pull the tip of the strap using the metal D-Ring to detach and unlock the buckle. Find the ideal length (which is to have the luggage handle at the same height or slightly lower than your hand while the bag is tipped) lock the buckle, secure the D-ring into its place, fold the extra strap if any and close the shoulder sleeve.

### Compatibility, Limitations of use, Precautions

For the best experience and most stability; pack the heaviest items in your bag as low as possible near the wheels, and the lighter items near the top.

The RetraStrap works with most handles having up to 2 inch diameter, Some T-shaped handles are not compatible as the attachment may slip out.

The RetraStrap works with carry-on size luggage only and not the big check-in bags due to weight load, weight distribution, shape and height.

The RetraStrap maneuvers the bag and turns up to 90 degrees when you turn as if you are pulling with your hand. Do not walk backwards while pulling your luggage using the RetraStrap.

The RetraStrap is designed to pull wheeled carry-on luggage and not to carry the load off the ground.

Do not pull luggage using the RetraStrap unless worn around the shoulder in a cross body manner.

The RetraStrap may be used for pulling luggage on flat surfaces only, for safety, it is recommended that you hold on to the luggage when going through stairs, curbs, elevators, and electric walkways.

Always keep an eye on your surroundings and other people walking around you.

The RetraStrap is meant for pulling luggage hands free while walking only. Running while pulling the luggage using the RetraStrap may be unsafe and uncomfortable.

The RetraStrap may work with children wheeled school bags or travel bags but adult supervision is advised.

Use the RetraStrap at your own risk.
